

Hello Henry,
Here is more correspondence.
Thanks,
Carolyn

Subject: 3.3 Acre Rezone

The assumption that dredging would have dire consequences to the environment is just - an assumption with zero factual basis. I can assume taking medication prescribed by me doctor would have a dire impact on my health or I can assume that if I buy a lottery ticket, I will become wealthy. Any of those thing could happen. But what are the odds? Certainly the odds favor doctor prescribed medication being beneficial to my health, though that's not guaranteed. The odds do not favor my becoming wealthy by buying a lottery ticket but if I don't win, what have I lost? Maybe a few dollars. And if we take the gamble and dredge a few acres of the bay, we stand to gain substantially in community economic terms where everyone benefits whereas an objective analysis of past dredging activities, and there have been plenty, that show virtually no deleterious affects on the environment that last more than a season or two. In short, our local environment is remarkably self-healing. That's what the evidence shows, no matter how you parse the words.

Mr. Barton,

Thank you for your comments. They have been received and included in the record.

Respectfully,
Henry
